Business Impact Assessment (RTO and RPO)

Company	Raízes Soluções e Tecnologia Ltda (CNPJ 51.467.037/0001-65)
Version	1.0
Effective date	03 November 2026
Next review	03 November 2027
Owner	Security and Privacy Officer, contato@raizesolucoes.com.br
Approved by	Management of Raízes Soluções e Tecnologia Ltda

1. Purpose and method

This assessment identifies the critical assets and processes of Raízes, the impact of losing them, and the recovery objectives that the Business Continuity and Disaster Recovery Plan must meet. For each asset, management rated the impact on customers and on the business of an outage of 24 hours or more, and of the loss of data created since the last backup.

2. Definitions

- RTO (Recovery Time Objective): the maximum time an asset may stay unavailable before service must be restored.
- RPO (Recovery Point Objective): the maximum amount of recent data, measured in time, that may be lost.

3. Recovery objectives

Management set the following objectives on 03 November 2026:

- RTO: 24 hours for all assets listed below.
- RPO: 24 hours for assets that hold data, which matches the daily backups taken by the provider.

4. Critical assets

Asset	Provider	What depends on it	Impact if lost for 24 h	Priority	RTO	RPO
Customer databases and authentication	Supabase (AWS us-east-1, us-east-2)	Miller CRM and custom systems, all customer business data	High: customers cannot operate; data created after the last backup is at risk	1	24 h	24 h (daily backup)
Server functions and integration connectors (marketplaces, ERP)	Supabase	Data synchronization, OAuth authorizations	High: synchronization stops. Source data stays in the marketplace or ERP and is read again after recovery	1	24 h	24 h (redeployed from source code)
Integration credentials and secrets	Supabase tables, provider secret stores, password manager	Access to marketplaces and ERPs on behalf of owners	High: integrations stop until credentials are restored or owners authorize again	1	24 h	24 h
Source code and release pipeline	GitHub	Ability to fix, rebuild and redeploy	Medium: running systems are not affected; changes stop	2	24 h	24 h
Customer web application and public website	Vercel	Access to the application and the website	High: users cannot reach the product. Nothing is	2	24 h	Not applicable (stateless)

			stored there; it is rebuilt from source code			
Email and documents	Google Workspace	Communication with customers and partners, incident notifications	Medium	2	24 h	Provider-managed
Stored files (logos, uploaded documents)	Supabase Storage	Display of customer logos and documents	Low to medium	3	24 h	Not covered by database backups (see section 6)

5. Dependencies and assumptions

- The provider takes daily database backups and keeps them for 7 days. A daily backup means that up to 24 hours of data can be lost, which is the RPO above.
- According to the provider, the project is not accessible while a backup is being restored, and the duration grows with database size. This time counts against the RTO.
- Raízes holds administrative access to all providers listed, and the recovery steps are in the Business Continuity and Disaster Recovery Plan.

6. Known gaps and improvement actions

- Files kept in Supabase Storage are not included in the provider database backups. Action: periodic export of critical stored files, to be reviewed at each annual assessment.
- Point-in-time recovery, which would reduce the RPO to minutes, is an optional paid feature of the provider and is not enabled. It is re-evaluated at each annual review according to customer needs and cost.
- The restoration of a backup into a new project is tested at least once a year (see the Incident Exercise Program).

7. Review

This assessment is reviewed at least once a year, after any significant incident, and when a critical asset, provider or customer commitment changes. Owner: Security and Privacy Officer (contato@raizesolucoes.com.br).
