Vulnerability and Threat Management Procedure

Company	Raízes Soluções e Tecnologia Ltda (CNPJ 51.467.037/0001-65)
Version	1.0
Effective date	03 November 2026
Next review	03 November 2027
Owner	Security and Privacy Officer, contato@raizesolucoes.com.br
Approved by	Management of Raízes Soluções e Tecnologia Ltda

1. Purpose and scope

This procedure defines how Raízes finds, prioritizes and fixes vulnerabilities in the software we build and in the components we use.

2. Sources of vulnerabilities

- Dependency advisories and security notices of our providers.
- Security review of each integration before release.
- Automated tests, including tests for isolation between customers and for exposure of credentials and personal data.
- Reports received from customers, partners or researchers at contato@raizesolucoes.com.br.

3. Preventive controls

- Every change is reviewed by a second engineer and passes automated tests before release. Tests are validated by deliberately breaking the code to confirm that they fail.
- Dependencies are audited monthly and before releases.
- Secrets are kept out of source code, and exposed secrets are rotated at once.

4. Remediation targets

- Critical: fix or mitigation within 7 days.
- High: within 30 days.
- Medium: within 90 days or in the next planned release.
- Low: handled in regular maintenance.

5. Threat awareness

The engineering team follows security advisories of the technologies and providers we use and applies emergency patches outside the normal cycle when needed.

6. Records and review

Findings and fixes are recorded in our issue tracker. This procedure is reviewed at least once a year. Owner: Security and Privacy Officer (contato@raizesolucoes.com.br).
